

## DIACUT™

Thank you for choosing Diacut™ and our line of wheels, discs and cylinders. Diacut™ was specially developed for cutting, shaping and contouring zirconia, lithium disilicate and porcelain.

Used best at low speed (10,000 RPM or less) Diacut™ is smooth cutting, long lasting, and does not heat up your restorations.

### IMPORTANT!

When using new Diacut™ tools, always blast the cutting surface with Aluminum Oxide to remove the sheen and allow a good abrasive surface.
